EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Christopher Lipp on January 7, 2005.

In the claims:

Non-elected claims 37-42 are cancelled.

Allowable Subject Matter

2. Claims 1-25, 27-36, and 43-48 (renumbered 1-41) are allowed. The following is an examiner's statement of reasons for allowance:

The closest prior art of record is Horst, which is directed to a pneumatic tire construction having a belt reinforcement structure, wherein the maximum section width of the tire extends through the rim (it is located at the interface between the tire/carcass and the rim). Furthermore, it is clearly evident from the Figures that (a) the tire/carcass structure has a pair of end portions that engage respective rim portions and (b) the tire/carcass structure has a pair of neighboring portions (that portion which is radially outward of the engagement between the end portions and the rim) that are adjacent said end portions and have a center of curvature that is located outside of said carcass

ply with respect to the rotational axis of the tire. However, the tire construction of Horst is not formed of a single maximum width point that extends through said rim as is required by the claimed invention (tire of Horst actually has two such points, one at the axially outer end of the shoulder and one that at the bead/rim interface- See Figures 4 and 6). An alternative embodiment of Horst (Figure 7) does depict a tire having a single maximum width point- in this instance, though, said point is located at the axially outer end of the shoulder and does not extend through the rim. As such, one of ordinary skill in the art at the time of the invention would not have found it obvious to form the tire construction of the claimed invention, including a tire having a single maximum width point that extends through said rim and a carcass structure in which neighboring portions that are not held within the rim contain a center of curvature that is axially outward of said carcass structure.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
